3. SCIENTIFIC & TECHNICAL SPECIFICATIONS

Mathematical Formulation: Planar Euclidean metric d = √((x■ - x■)² + (y■ - y■)²) scaled via orthorectified ground sampling distance 10.0 m/px. Real-world distance D = d × resolution.
Sustainable Development Goal Alignment: AstroSight aligns with United Nations SDG 9 (Industry, Innovation, and Infrastructure) by advancing automated planetary remote sensing, AI spatial analytics, and space exploration research infrastructure.

Scientific Disclaimer: *AstroSight automated crater boundary coordinates and distance vectors are generated for scientific research and mission planning. Topographical scale assumes standard planar projection for small-area orbital imagery. Always cross-correlate with high-resolution LROC NAC / HiRISE elevation models.*
